

Temporary Wireless is Key to Events Requiring High Capacity Internet

Oct 11, 2018 | [Blog](#), [Dedicated Internet](#), [Fixed Wireless](#), [ISP](#), [Temporary Wireless](#)

TEDx, Detroit Jazz Fest, and Electronic Music Festival rely on 123Net's premier event wireless, because it provides quick and easy high-speed internet access. [Fixed Wireless](#) technology is a highly effective solution for concerts, trade shows, conferences, and much more.

When organizing an event, finding a dependable, high-speed internet connection is always a concern. Premier event wireless solutions simplify this challenge by creating a temporary, reliable internet solution that is rapidly deployed and does not require a long-term commitment. Premier event wireless gives event-goers access to high-capacity applications needed to send pictures, stream videos, and much more.

Rapid Deployment

Fixed Wireless can be up and running in as little as 7-14 days. Traditional internet solutions require more time and effort from the service provider. With premier event wireless, organizers can plan weeks ahead instead of months.

Flexible

Temporary Fixed Wireless is far more versatile than traditional internet services. Bandwidth is easily scalable, ensuring that specific requirements are met. Wireless internet provides service in hard-to-reach areas where physical cables are not available. If events are held in an area limited by infrastructure or other restrictions, customers can simply have a Fixed Wireless receiver installed for connectivity.

Reliable, Low Latency Internet

Temporary Fixed Wireless offers premium quality without the hassle. Towers transmit narrow beams, limiting interference. This helps lower latency and improve overall connectivity. Fixed Wireless beams are also secured by [128-Bit AES Encryption](#), protecting customers' confidential information.

Traditional internet options are often more expensive and time-consuming. Wireless networks are installed with far less construction, reducing overall cost. After events, Fixed Wireless equipment can be quickly dismantled upon request.

123Net's premier event wireless provides [dedicated](#), symmetrical speeds up to 10 Gbps, along with the flexibility to scale bandwidth to your specific requirements. If your event requires reliable, high-capacity internet, 123Net's premier event wireless will deliver. For more information, visit <https://www.123.net/fixed-wireless/>
